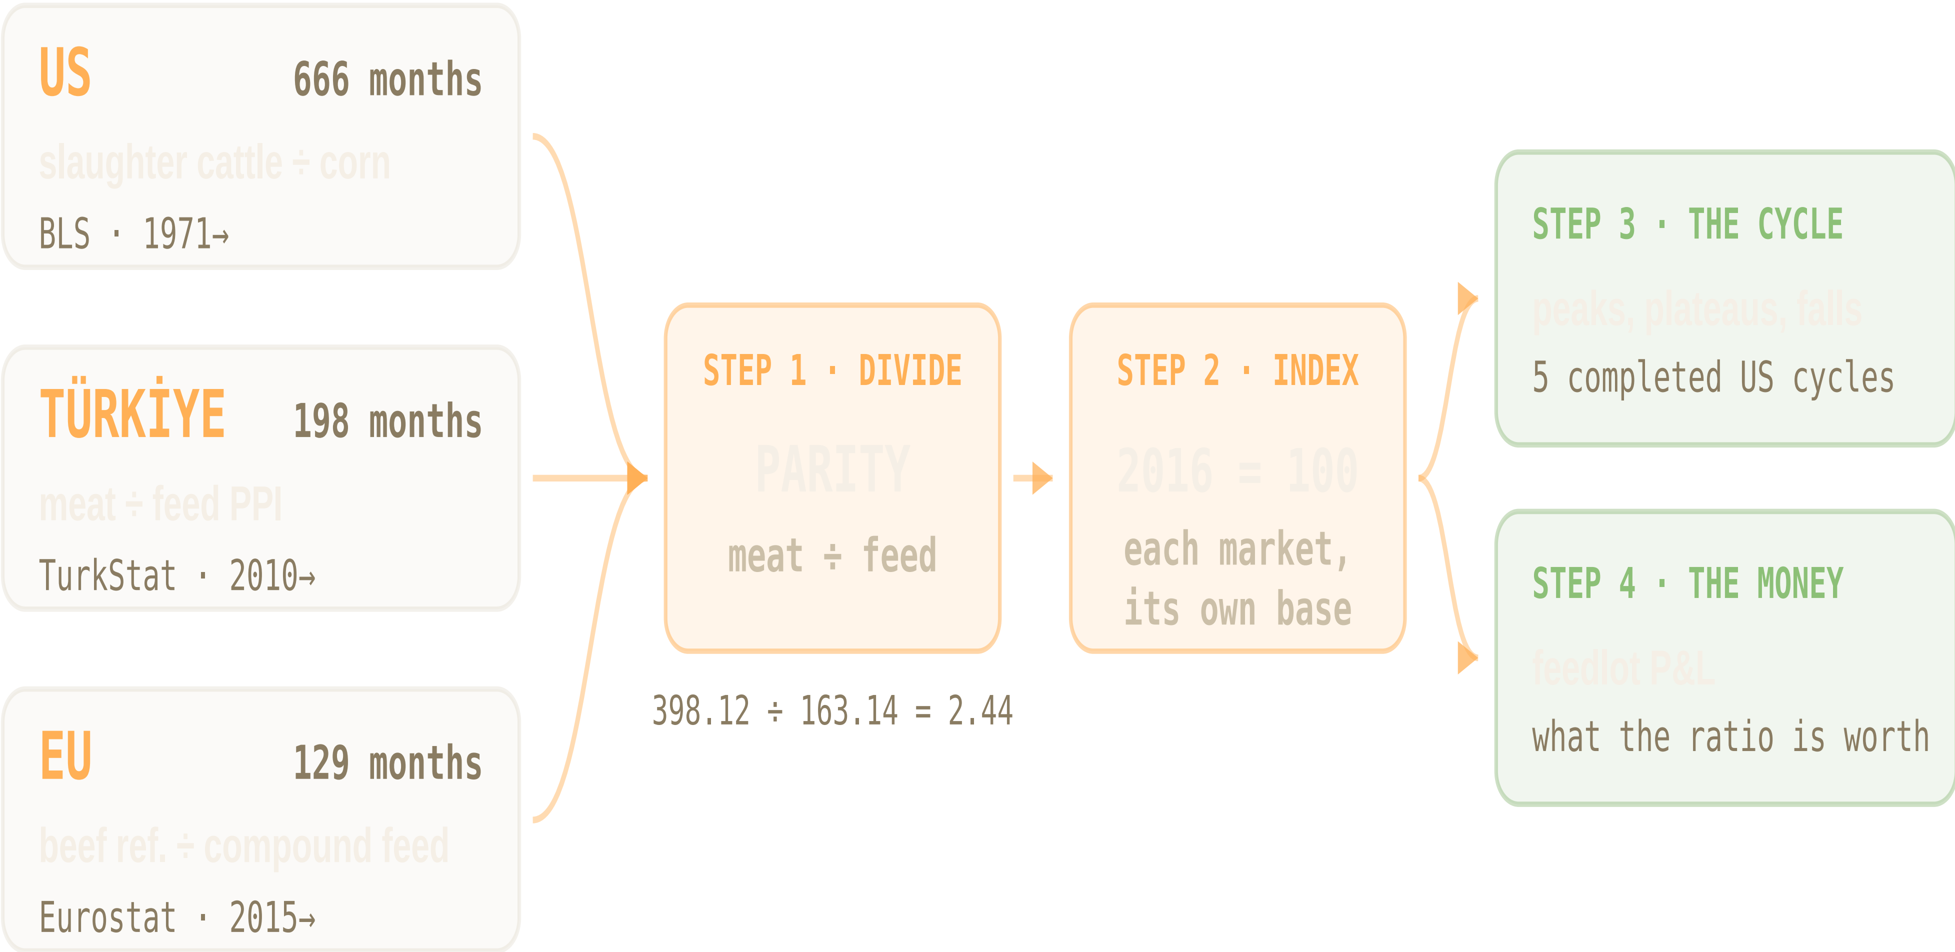
WHAT THIS STUDY IS · JULY 2026

Three markets, 993 months, one ratio.

Six published price series, consolidated into a single comparable measure of what a livestock producer earns — then read for its cycle.



ALL PRICES AS PUBLISHED BY THE NATIONAL STATISTICS OFFICES · NOTHING ESTIMATED, NOTHING BACKFILLED · DATA THROUGH JUNE 2026

LIVESTOCK CUSTOMER ECONOMICS · US · EU · TÜRKİYE · JULY 2026

Cattle producers in all three of our markets are at a cycle peak.

184 US **125** EU **121** TR

meat-to-feed parity today — each market against its own 2016 average

13

months the US has already spent at this peak

0

of the five previous US peaks that held

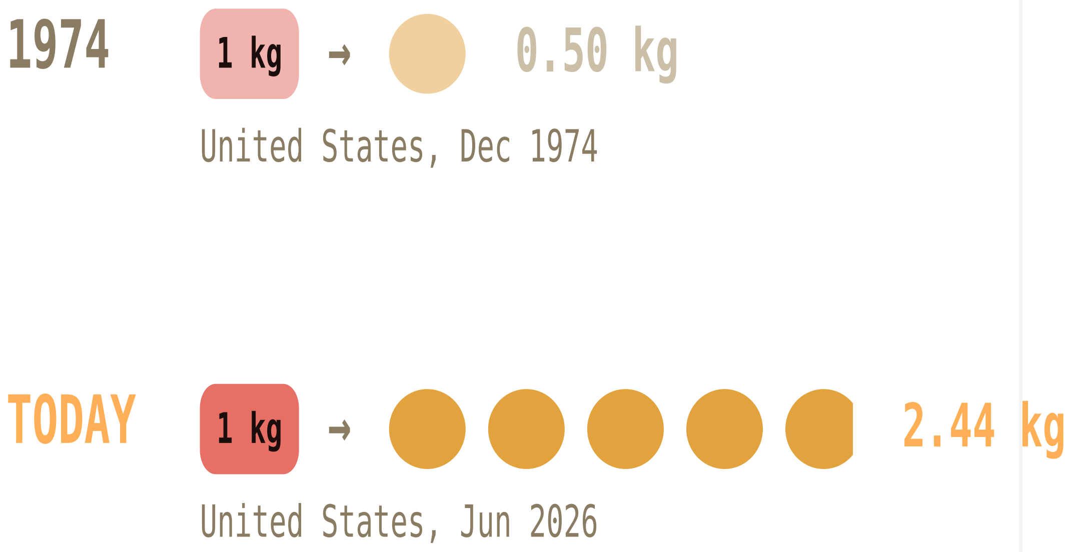
MEAT PRICE ÷ FEED COST · SOURCES: BLS (US), EUROSTAT (EU), TURKSTAT (TÜRKİYE) · DATA THROUGH JUNE 2026

WHAT YOU ARE LOOKING AT

One ratio: what a kilo of beef buys in feed.

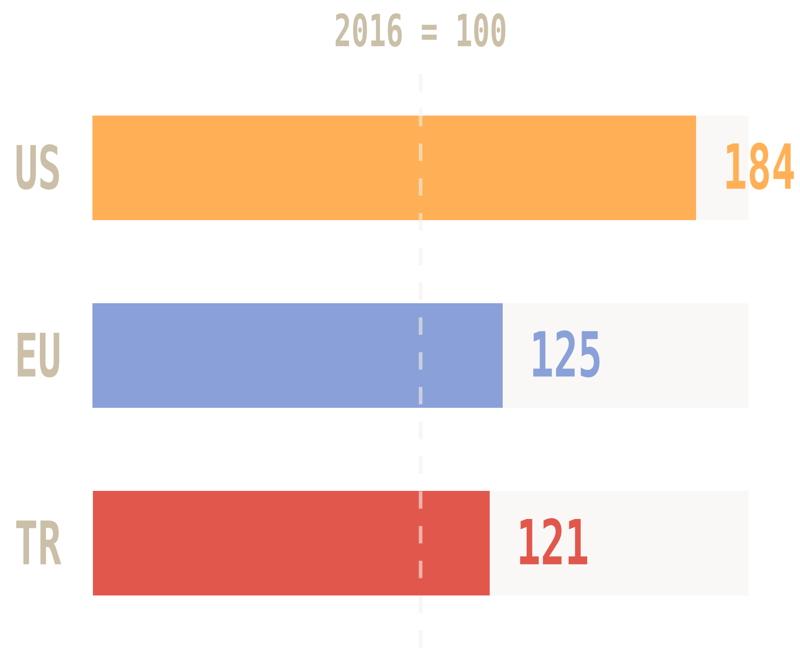
Higher = meat outpacing feed, the producer earns more. Lower = feed eating the margin.

ONE KILO OF US BEEF BUYS… (UNITED STATES ONLY)



each oval = 0.5 kg of feed · US meat and corn producer prices

ALL THREE MARKETS · EACH VS ITS OWN 2016



US 184 = 84% more feed per kilo of beef than in 2016.

Levels differ by market — read the shape, not the gap.

US slaughter cattle ÷ corn
BLS (US federal statistics office) · 1971→ · 666 mo

EU beef ref. price ÷ compound feed
Eurostat · 2015→ · 129 mo

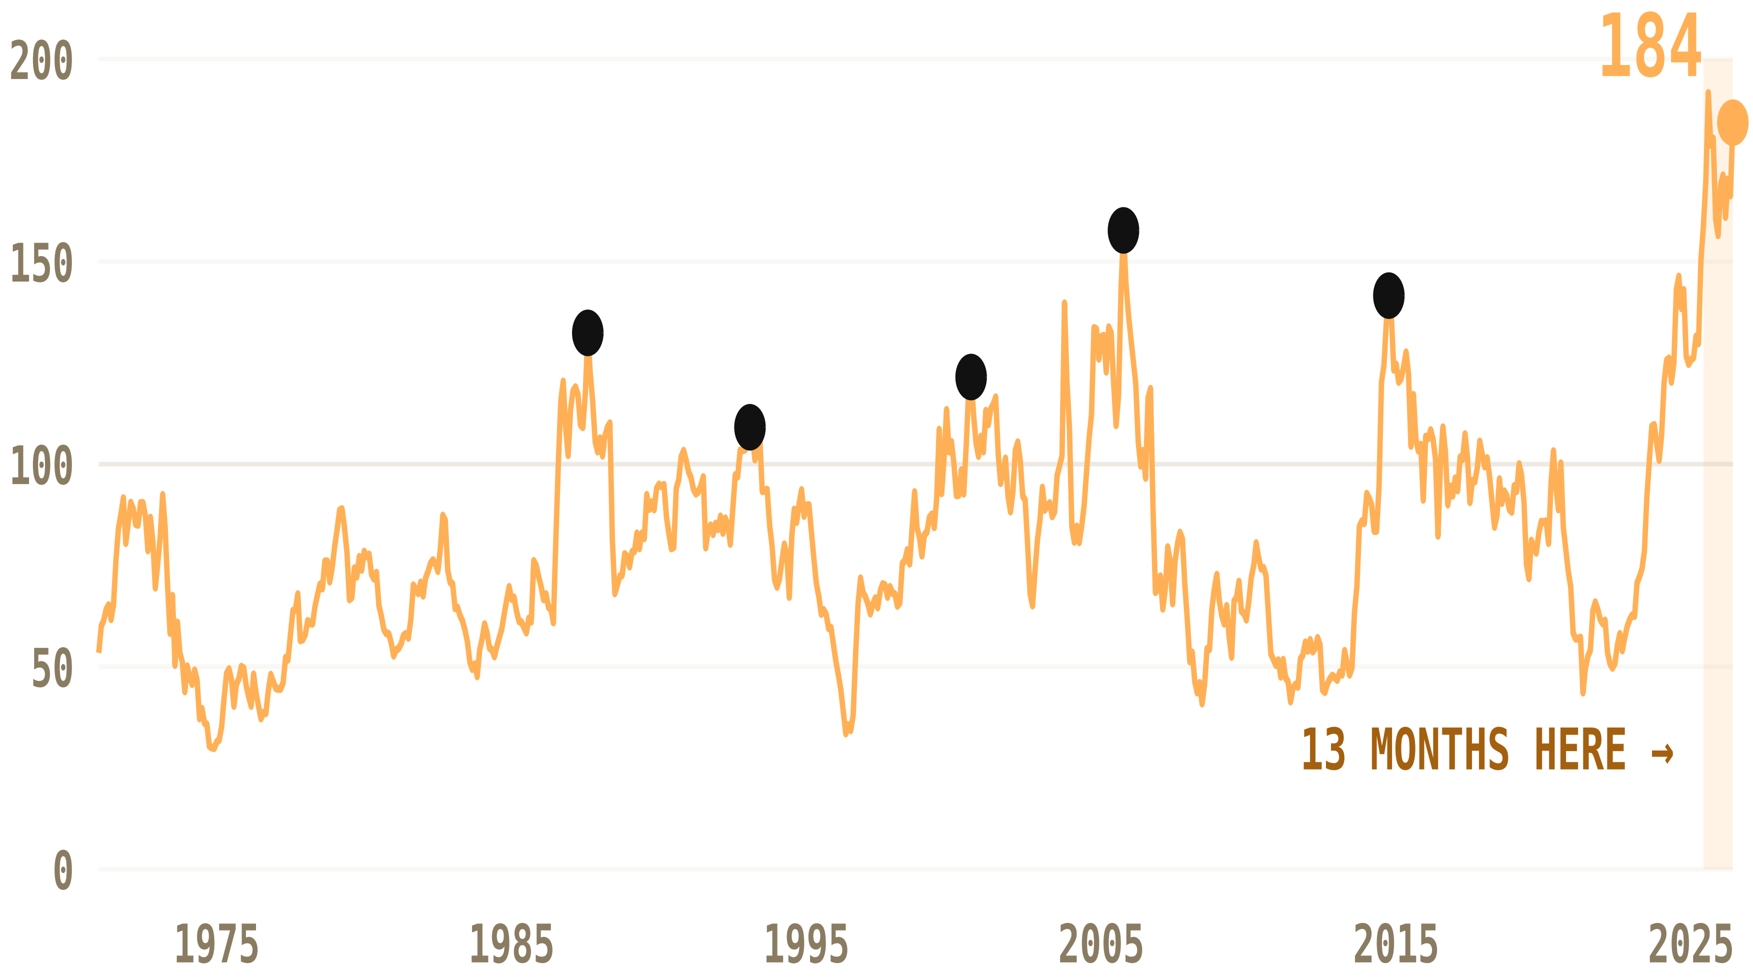
TR meat ÷ feed PPI
TurkStat · 2010→ · 198 mo

Not the same basket in each country — which is why each series is indexed to its own base, and why we read shape rather than level.

2 · WHERE WE ARE · UNITED STATES

The US: a record — and it has stopped climbing.

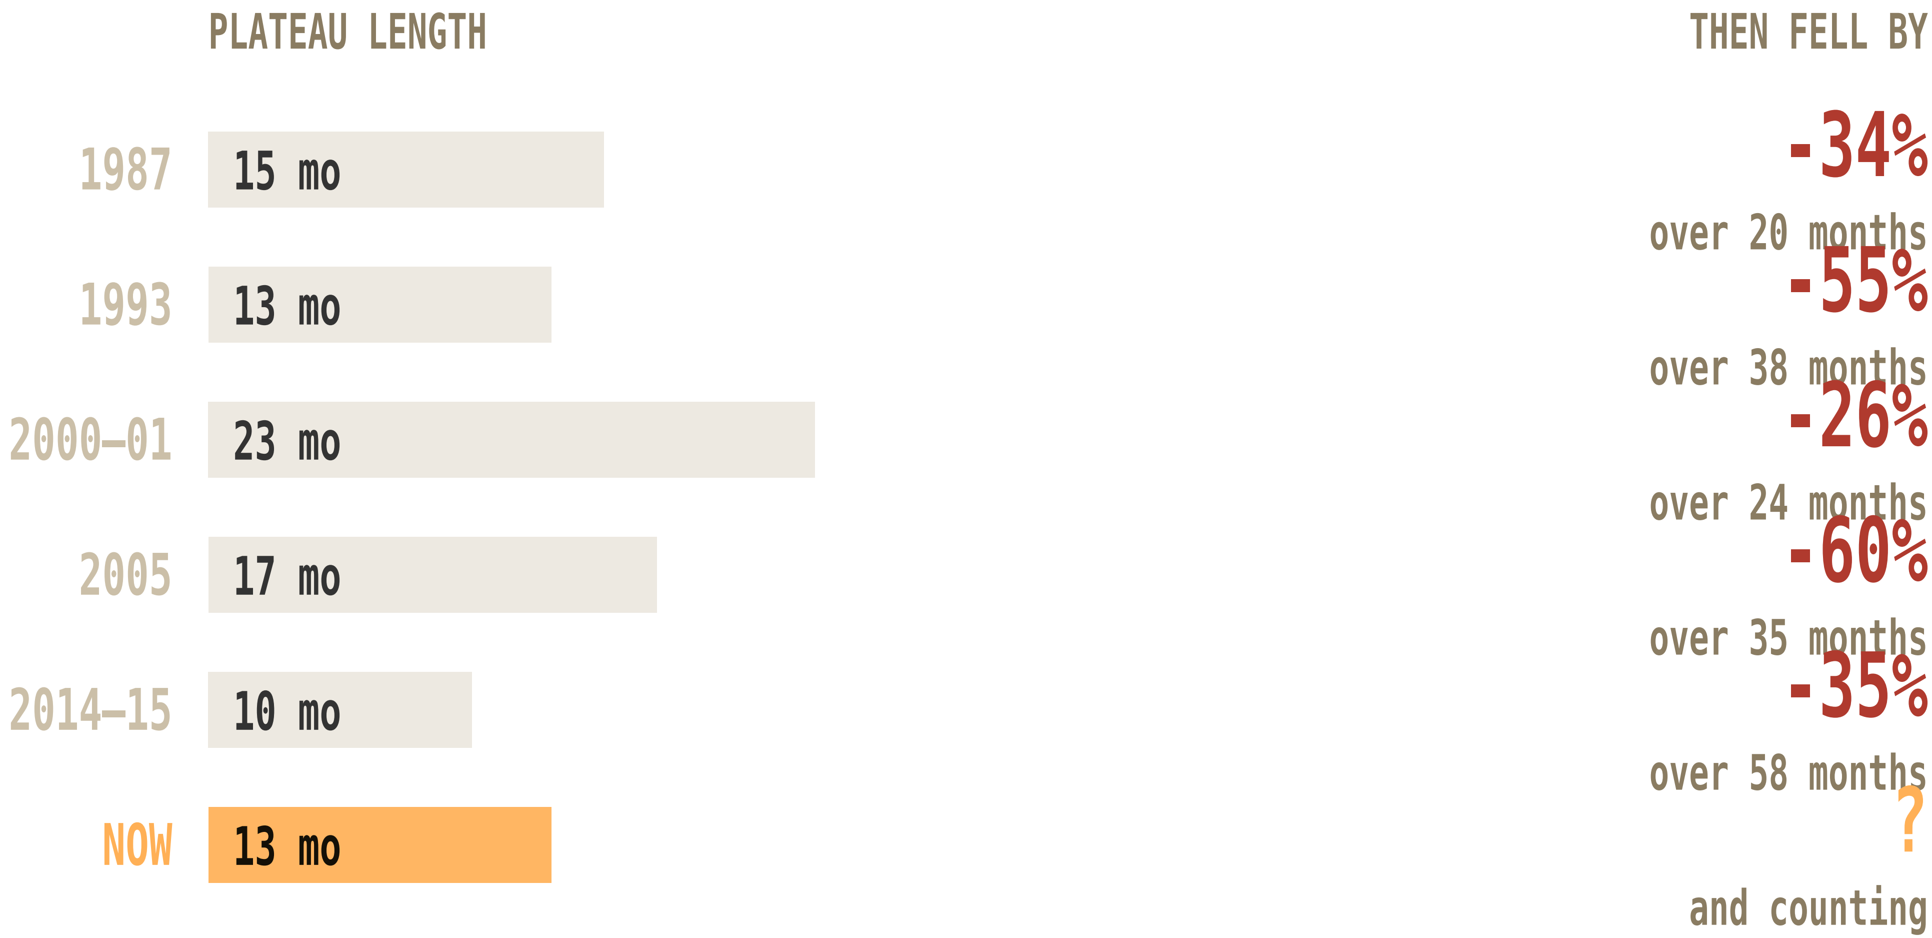
US only — the one market with a 55-year record. Line = producer margin ratio, one point per month; higher is better for the producer.



US MEAT-TO-FEED PARITY, MONTHLY, 1971–2026 · 2016 = 100 · DOTS = PREVIOUS CYCLE PEAKS

Five US peaks. Every one fell 25–60%.

US cycles, 1971–2026 — the only record long enough to count them. Bar = how long each peak lasted; right = how far the ratio then fell.

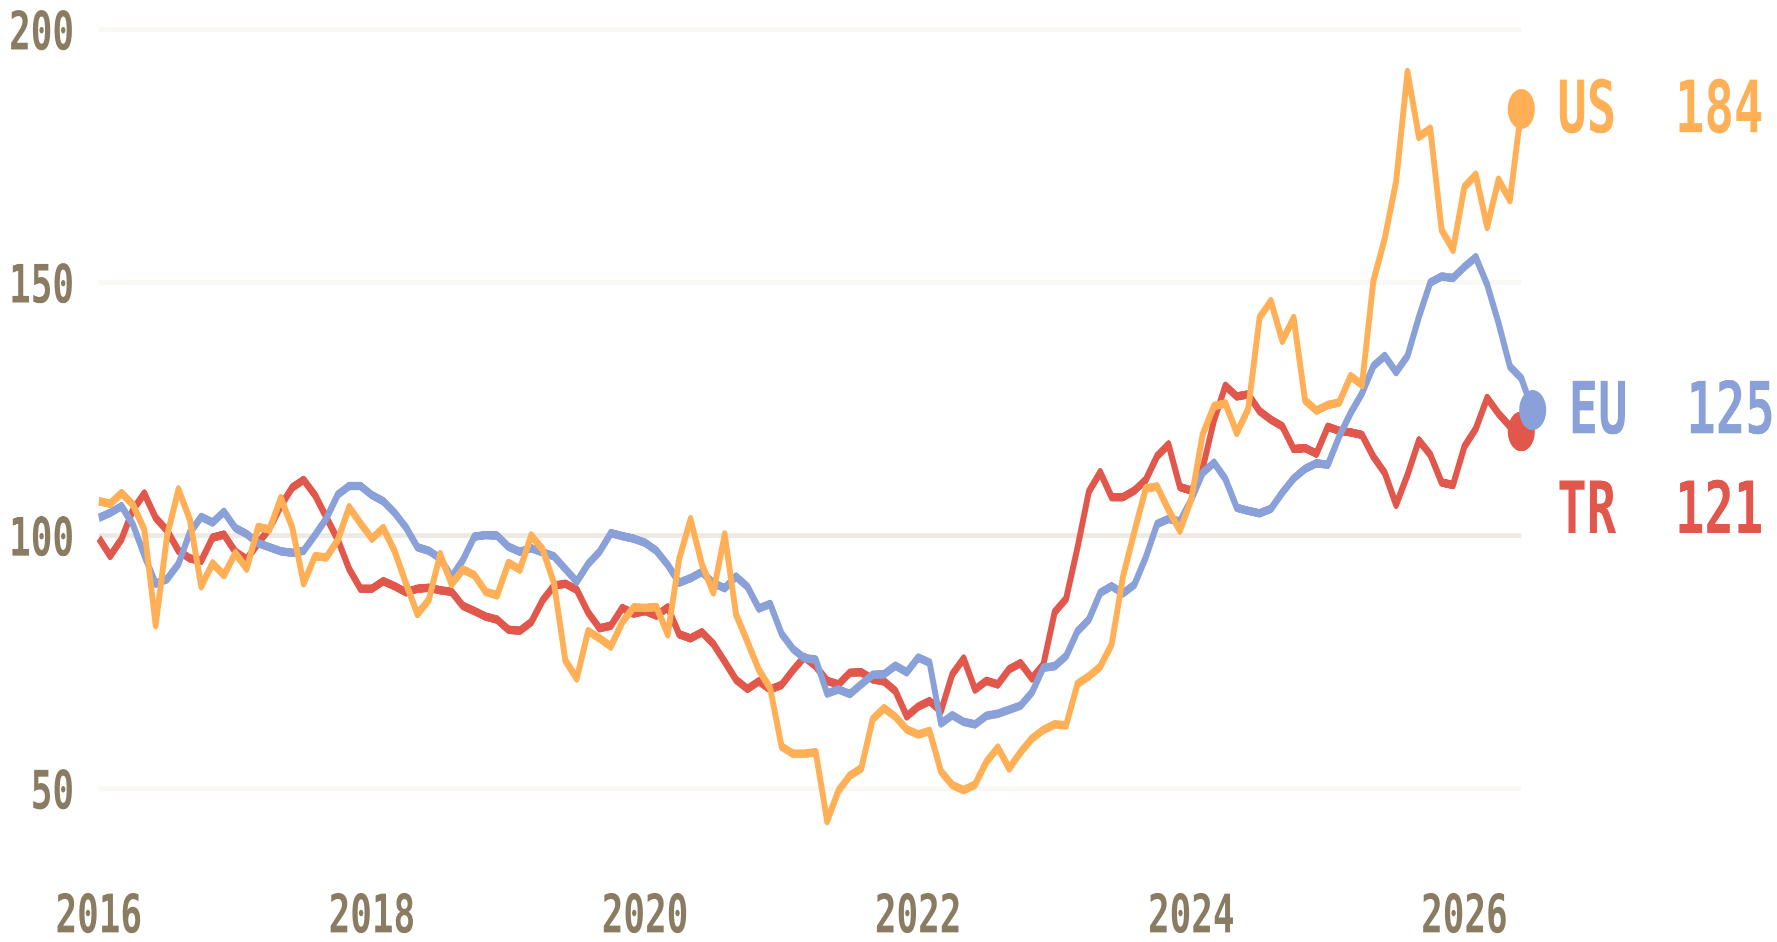


US MEAT-TO-FEED PARITY · PLATEAU = MONTHS WITHIN 10% OF PEAK · FALL = PEAK TO NEXT BOTTOM

4 · WHO IS EXPOSED · ALL THREE MARKETS

Three markets. One cycle. At the same time.

Now all three — each on its own 2016 = 100 base. Watch the shape, not the gap: the level is not comparable, the timing is.

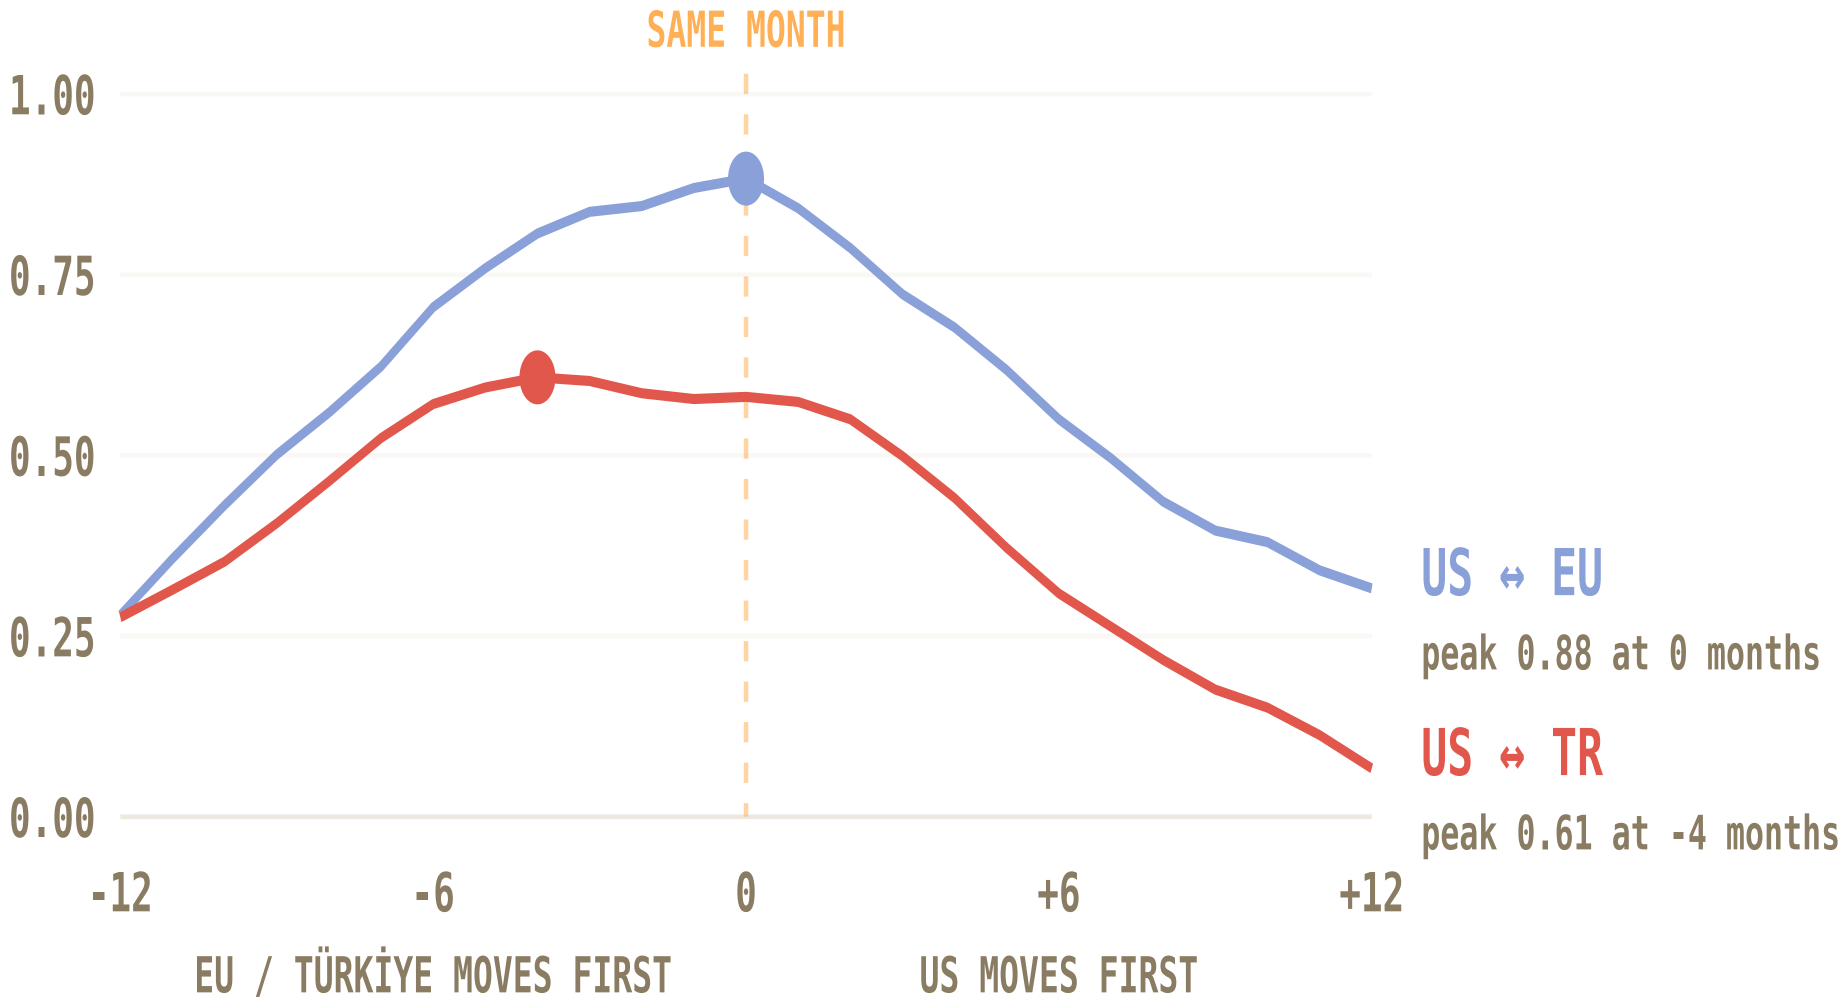


EACH MARKET INDEXED TO ITS OWN 2016 AVERAGE = 100 · US–EU CORRELATION 0.88 AT ZERO LAG

5 · ARE THEY REALLY THE SAME CYCLE?

Yes — and nobody goes first.

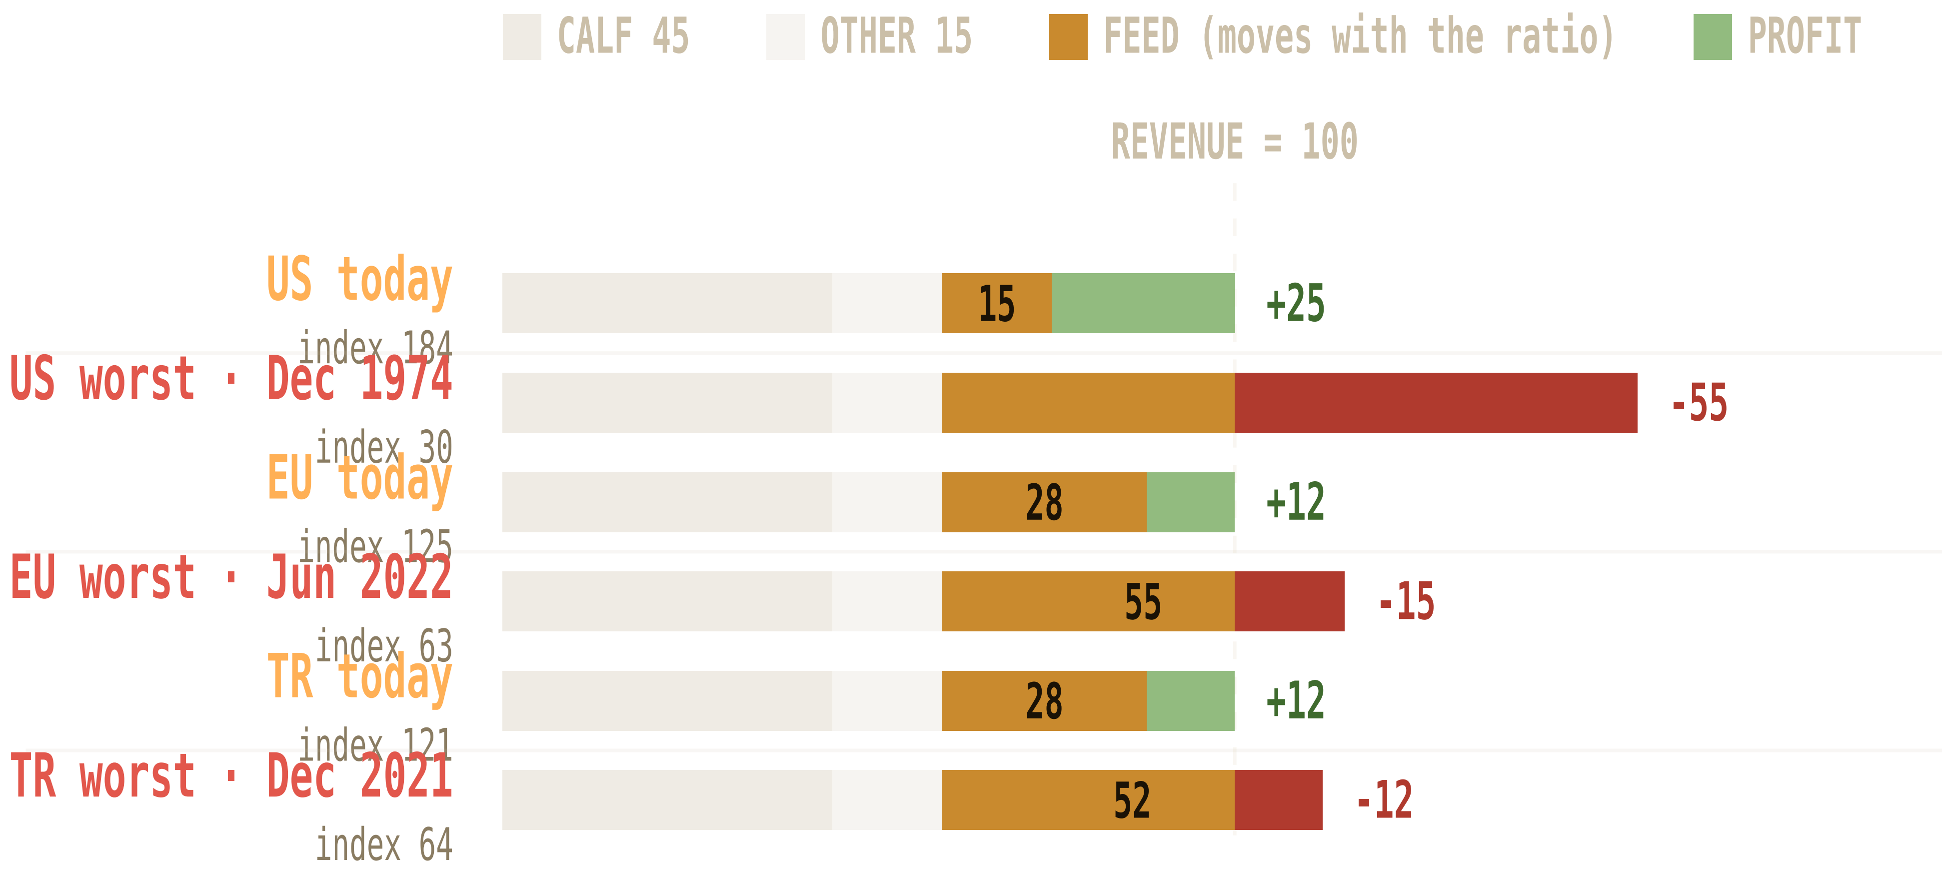
Correlation of year-on-year change, tested at every shift from −12 to +12 months. A market that led would peak clearly off-centre. The EU peaks exactly at zero; Türkiye is flat across −4 to 0.



PEARSON CORRELATION ON YEAR-ON-YEAR PARITY CHANGE · US–EU 116 OVERLAPPING MONTHS · US–TÜRKİYE 186

The same swing, in all three markets.

Costs per 100 of revenue — today vs each market's own worst month. One assumed cost structure, applied identically to all three markets.



These are modelled levels, not measured margins. Calf 45 and other costs 15 are assumed and held fixed for every market; only feed moves, at 35 × (that market's mean parity ÷ that month's parity). US calf prices are at a record today, so the real US margin is thinner than shown. What the data supports is the size of the swing, not the absolute level.

REVENUE INDEXED TO 100 · WORST MONTH = WITHIN EACH MARKET'S OWN RECORD · US 1971→ · EU 2015→ · TR 2010→

7 · SO WHAT

We don't know what they cut first.

1. ## The window is now

   Customers have cash today. The conversation is easier while they are profitable.

2. ## Phasing beats size

   A price move landing into a downturn behaves differently from one landing into a peak.

3. ## Next step: two to three weeks

   Map what producers actually cut, in what order, in the last two downturns — against our portfolio. The macro side is done.

DIRECTION IS WELL SUPPORTED · THE DATE IS NOT · PARITY IS A RATIO, NOT A MARGIN
