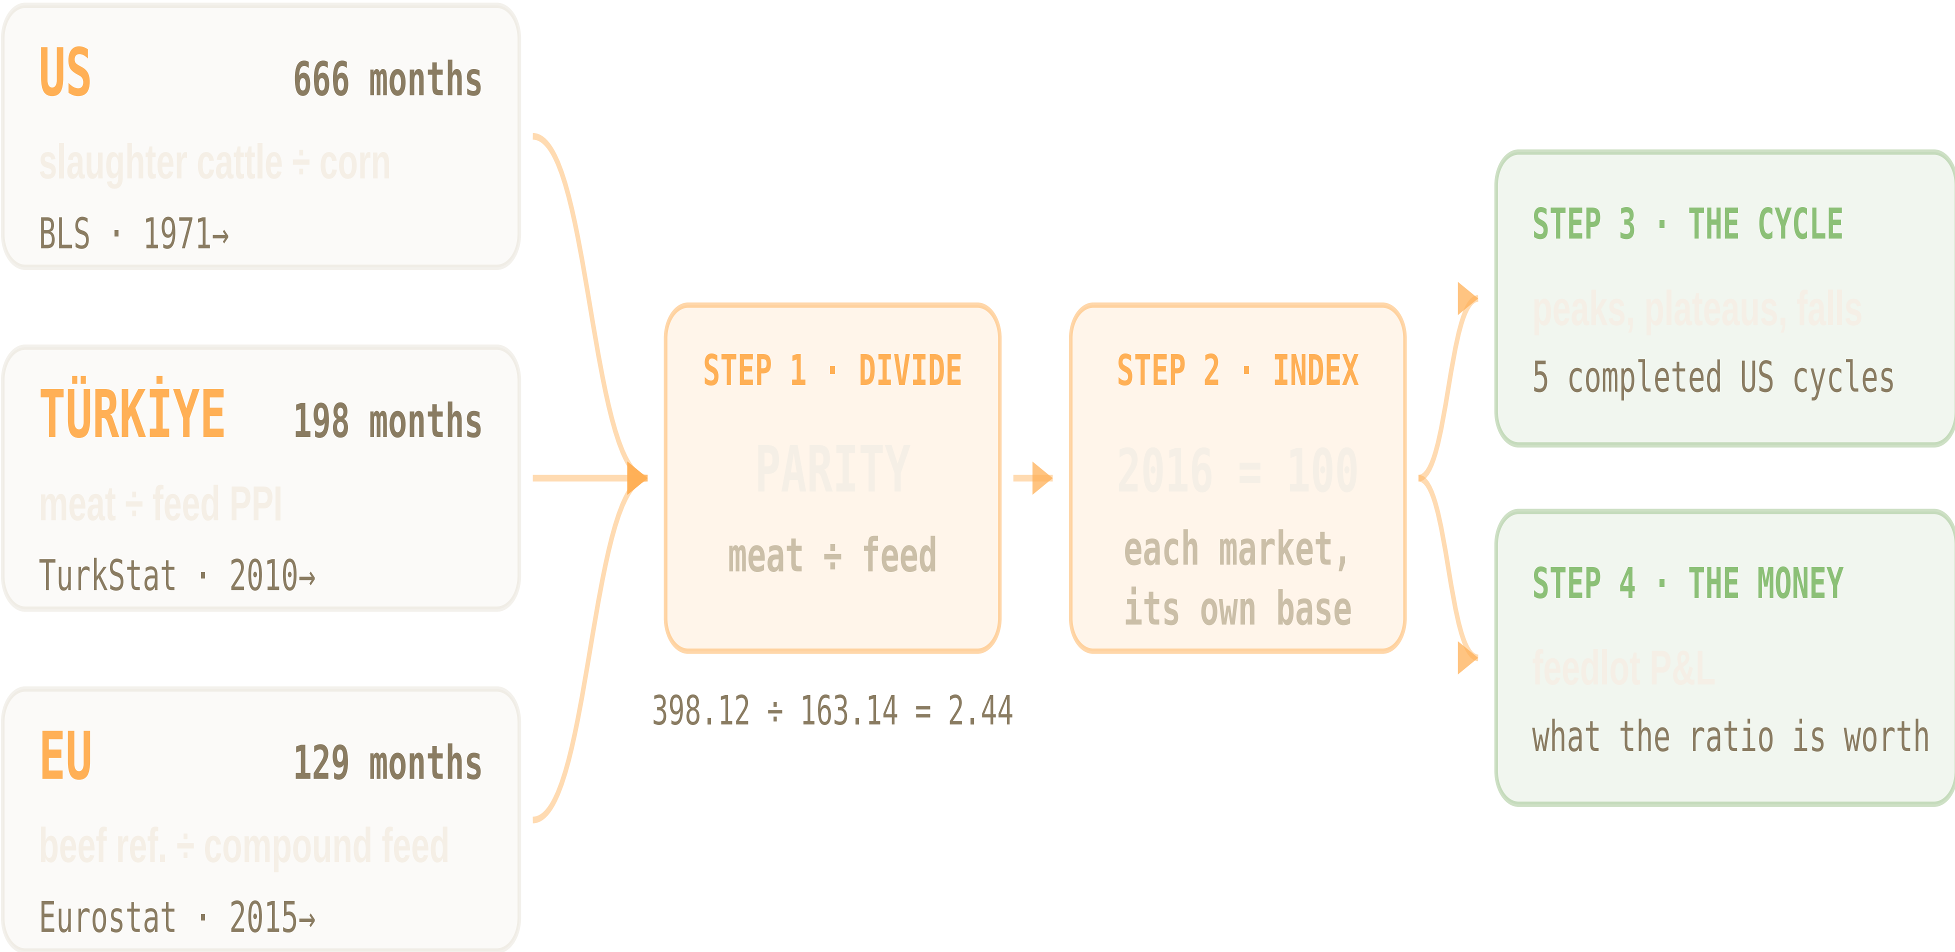
WHAT THIS STUDY IS · JULY 2026

Three markets, 993 months, one ratio.

Six published price series, consolidated into a single comparable measure of what a livestock producer earns — then read for its cycle.



ALL PRICES AS PUBLISHED BY THE NATIONAL STATISTICS OFFICES · NOTHING ESTIMATED, NOTHING BACKFILLED · DATA THROUGH JUNE 2026

LIVESTOCK CUSTOMER ECONOMICS · JULY 2026

Our customers are at their most profitable point in 55 years.

184

US meat-to-feed parity today (2016 average = 100)

13

months already spent at this peak

0

of the five previous peaks that held

MEAT PRICE ÷ FEED COST · US, EU, TÜRKİYE · BLS, EUROSTAT, TURKSTAT

WHAT YOU ARE LOOKING AT

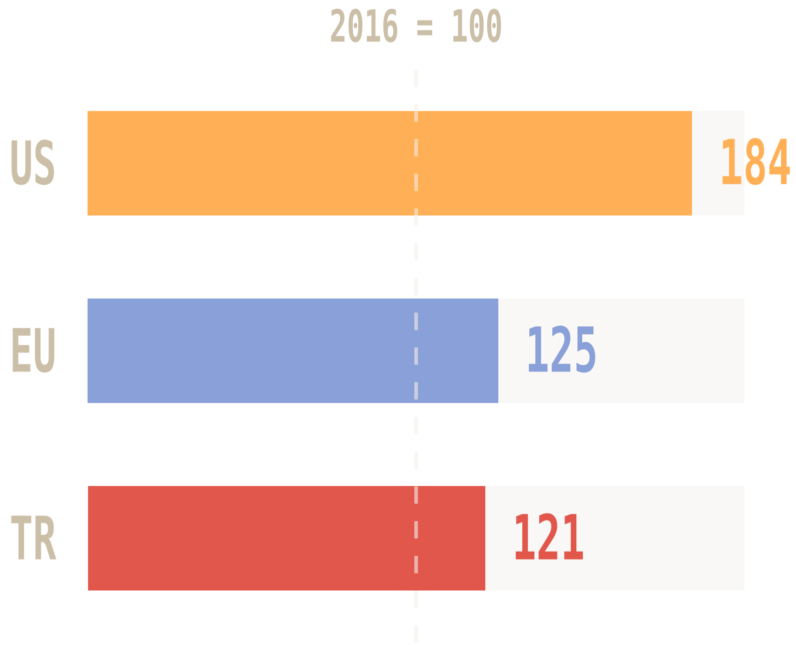
One ratio: what a kilo of beef buys in feed.

Higher = meat outpacing feed, the producer earns more. Lower = feed eating the margin.

ONE KILO OF US BEEF BUYS…

each oval = 0.5 kg of feed

…INDEXED TO EACH MARKET'S OWN 2016 AVERAGE



184 = 84% more feed per kilo of beef than in 2016.

Levels differ by market — read the shape, not the gap.

US slaughter cattle ÷ corn
BLS · 1971→ · 666 mo

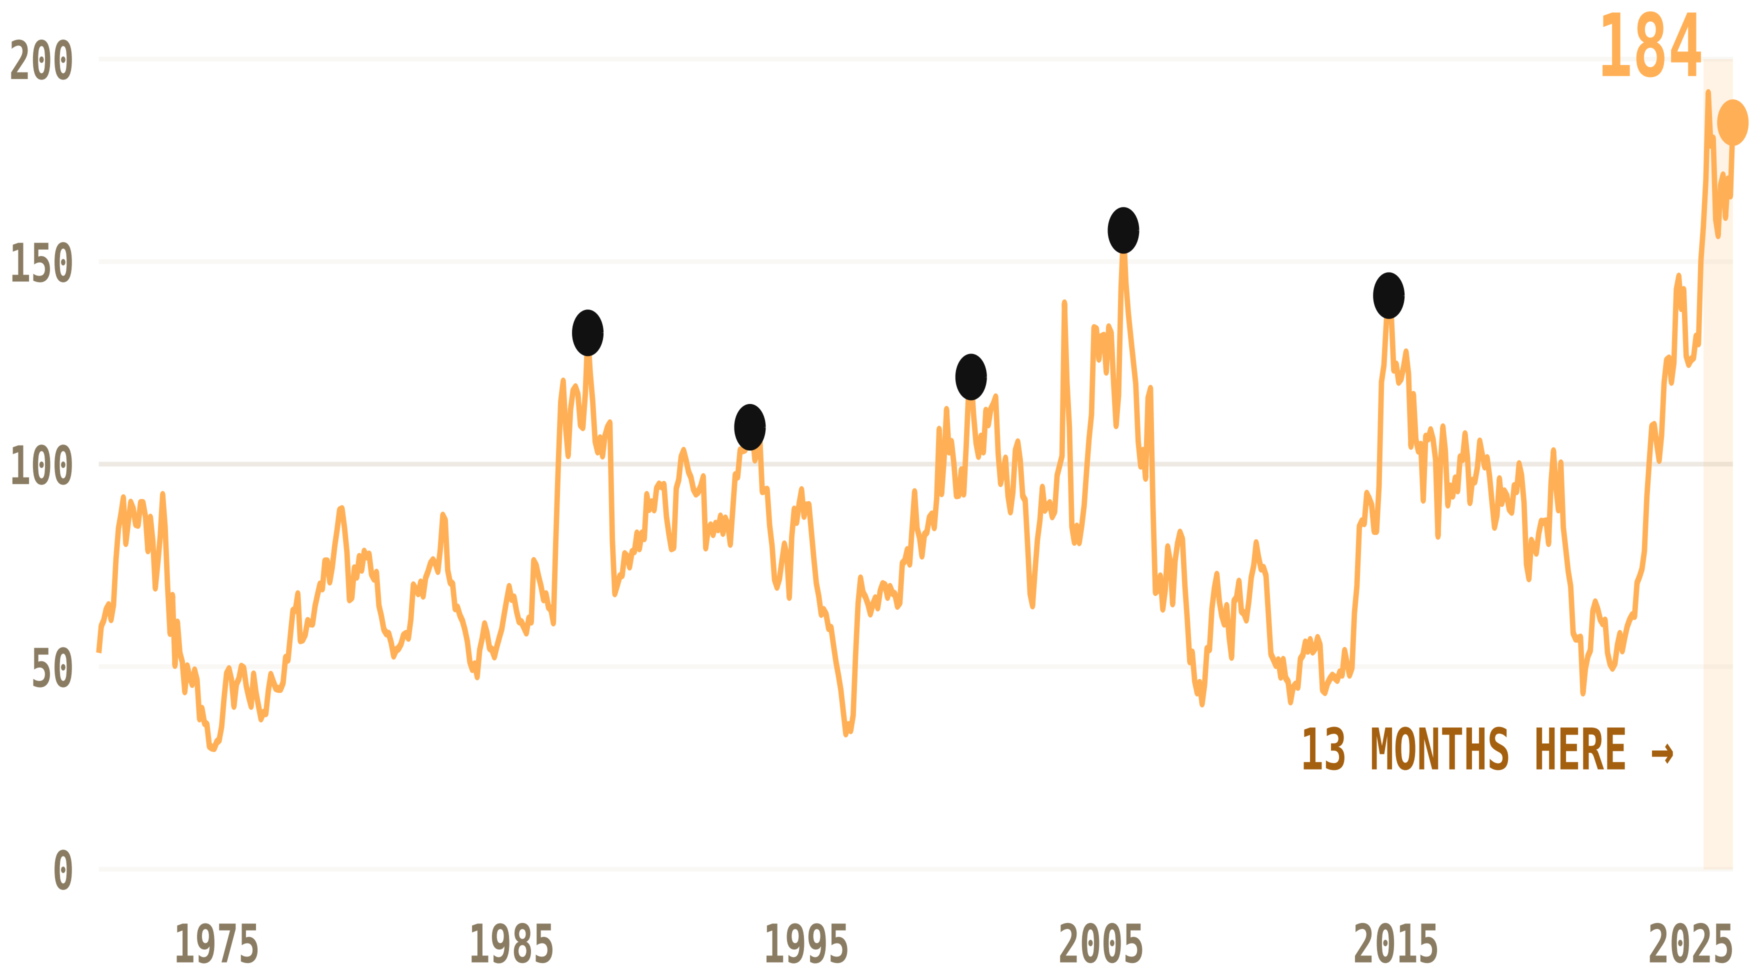
EU beef ref. price ÷ compound feed
Eurostat · 2015→ · 129 mo

TR meat ÷ feed PPI
TurkStat · 2010→ · 198 mo

Not the same basket in each country — which is why each series is indexed to its own base, and why we read shape rather than level.

The US: a record — and it has stopped climbing.

US only — the one market with a 55-year record. Line = producer margin ratio, one point per month; higher is better for the producer.



US MEAT-TO-FEED PARITY, MONTHLY, 1971–2026 · 2016 = 100 · DOTS = PREVIOUS CYCLE PEAKS

3 · WHAT HAPPENED LAST TIME. EVERY TIME. · UNITED STATES

Five US peaks. Every one fell 25–60%.

US cycles, 1971–2026 — the only record long enough to count them. Bar = how long each peak lasted; right = how far the ratio then fell.

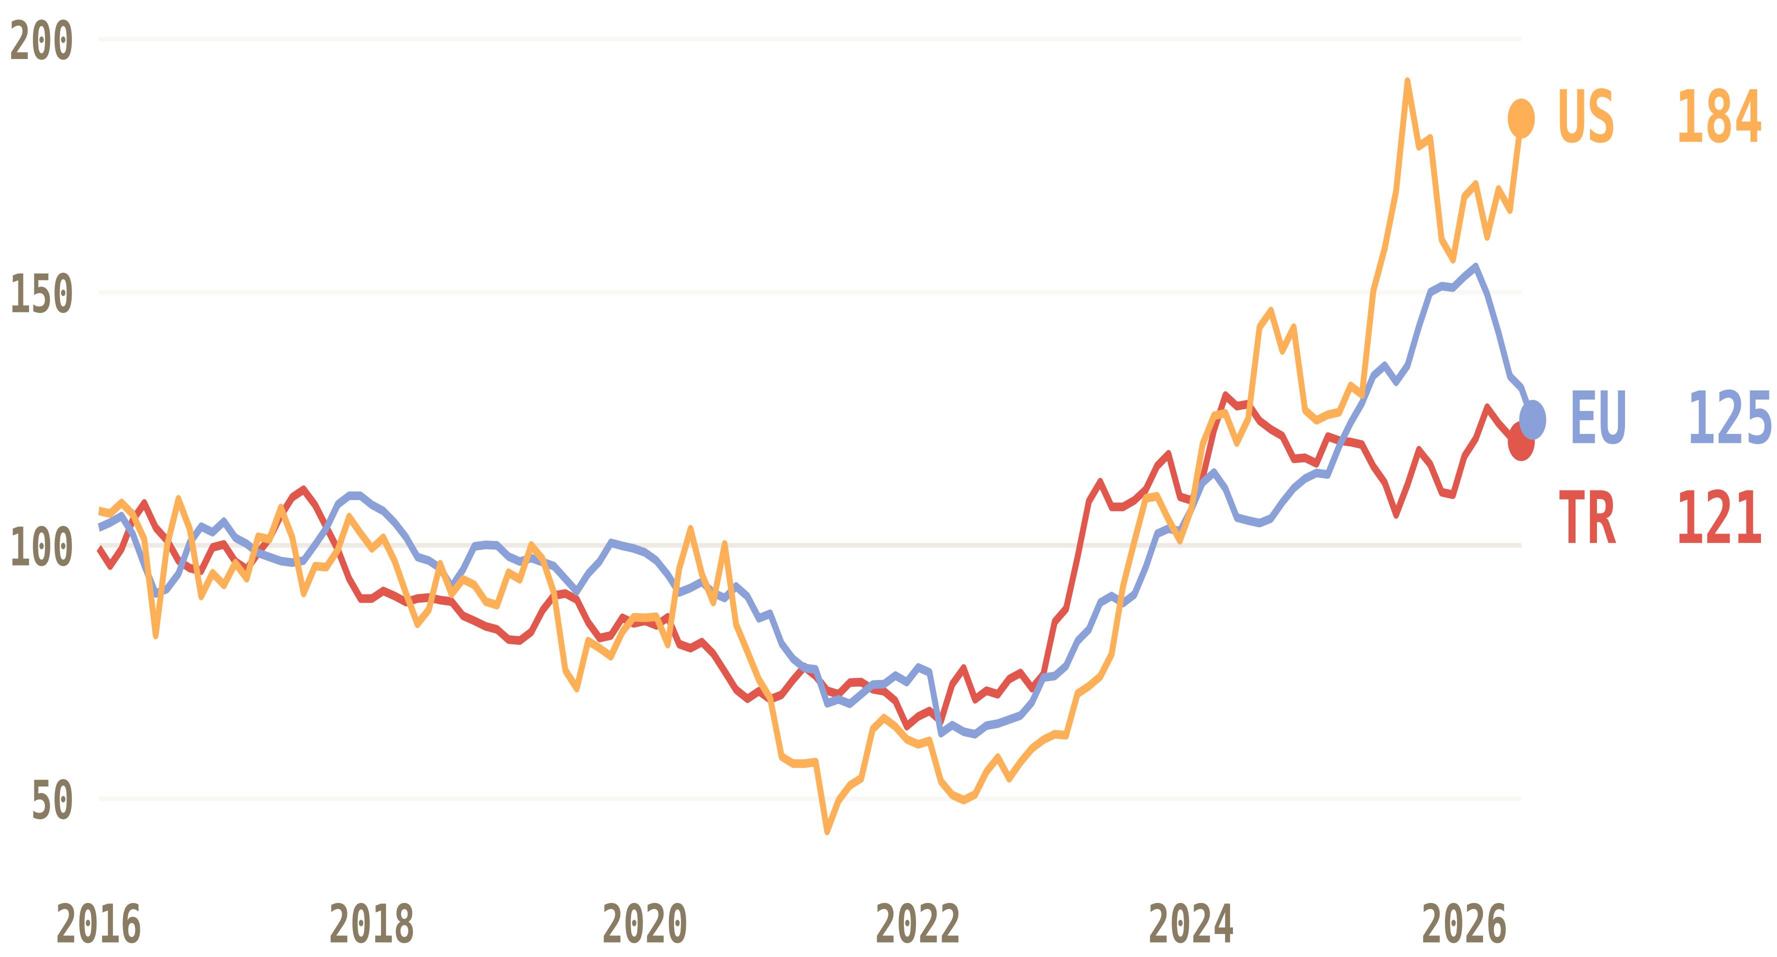
	PLATEAU LENGTH	THEN FELL BY
1987	15 mo	-34% over 20 months
1993	13 mo	-55% over 38 months
2000–01	23 mo	-26% over 24 months
2005	17 mo	-60% over 35 months
2014–15	10 mo	-35% over 58 months
NOW	13 mo	? and counting

US MEAT-TO-FEED PARITY · PLATEAU = MONTHS WITHIN 10% OF PEAK · FALL = PEAK TO NEXT BOTTOM

4 · WHO IS EXPOSED · ALL THREE MARKETS

Three markets. One cycle. At the same time.

Now all three — each on its own 2016 = 100 base. Watch the shape, not the gap: the level is not comparable, the timing is.

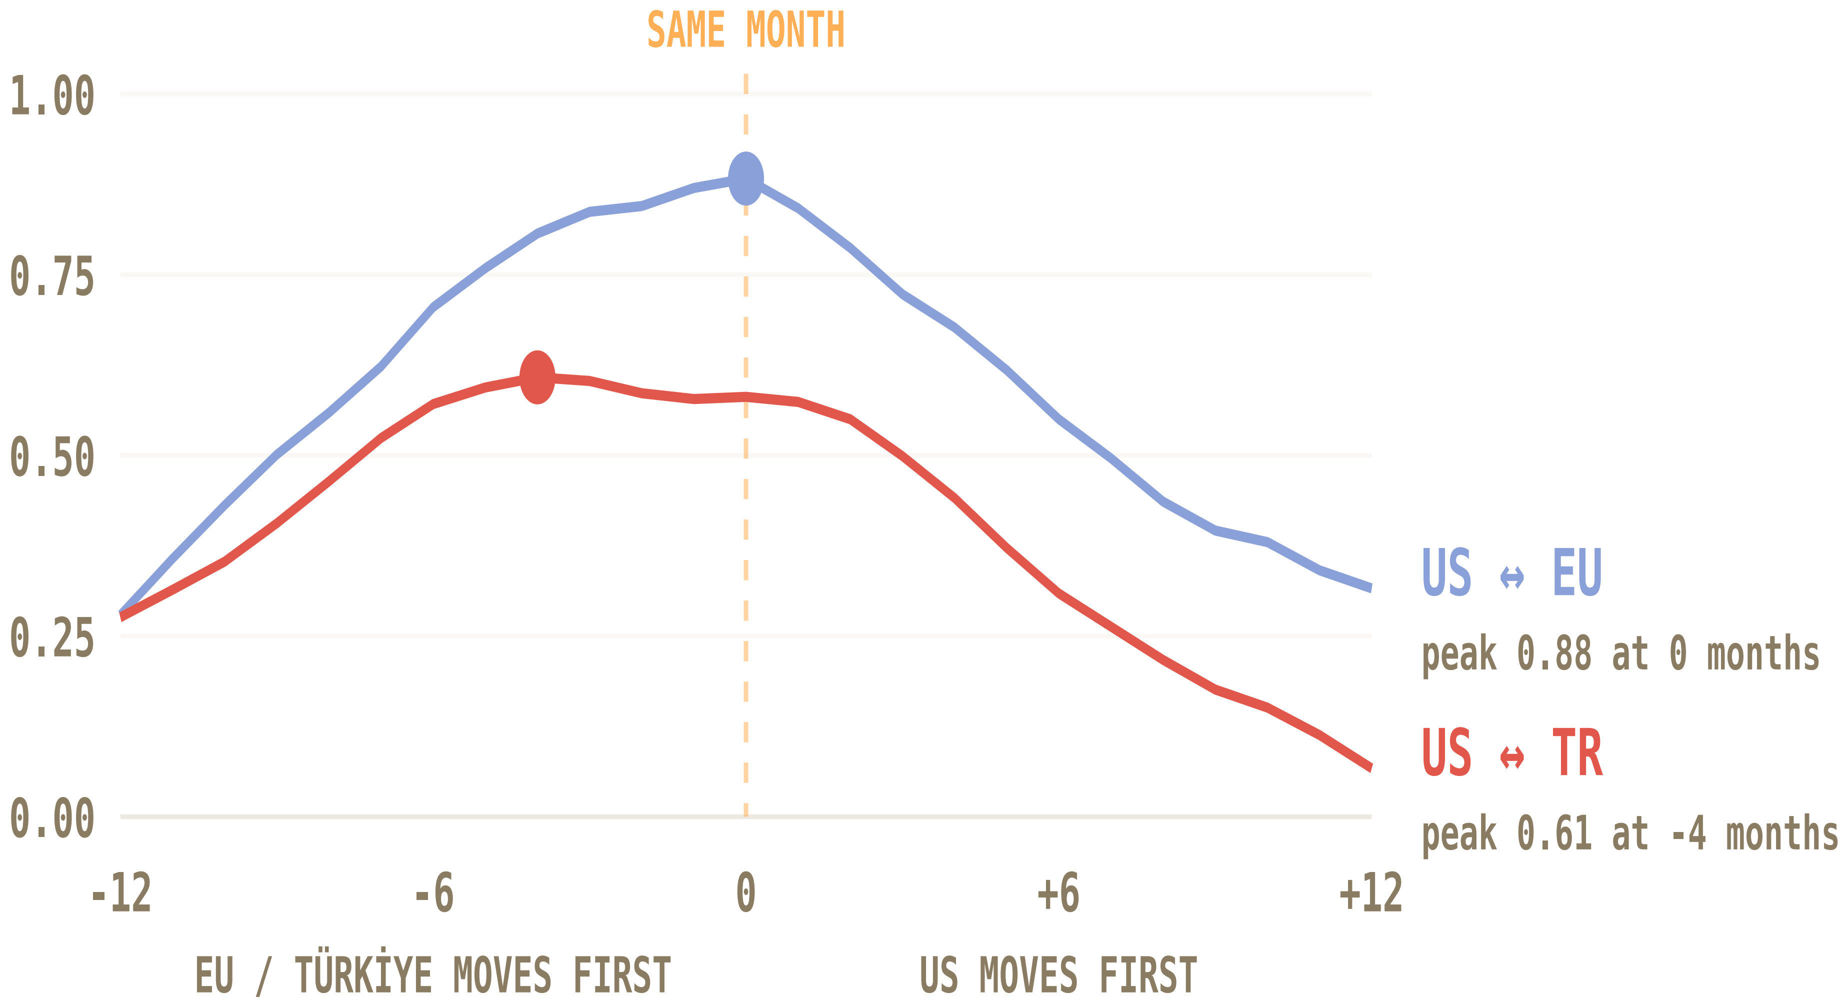


EACH MARKET INDEXED TO ITS OWN 2016 AVERAGE = 100 · US–EU CORRELATION 0.88 AT ZERO LAG

5 · ARE THEY REALLY THE SAME CYCLE?

Yes — and nobody goes first.

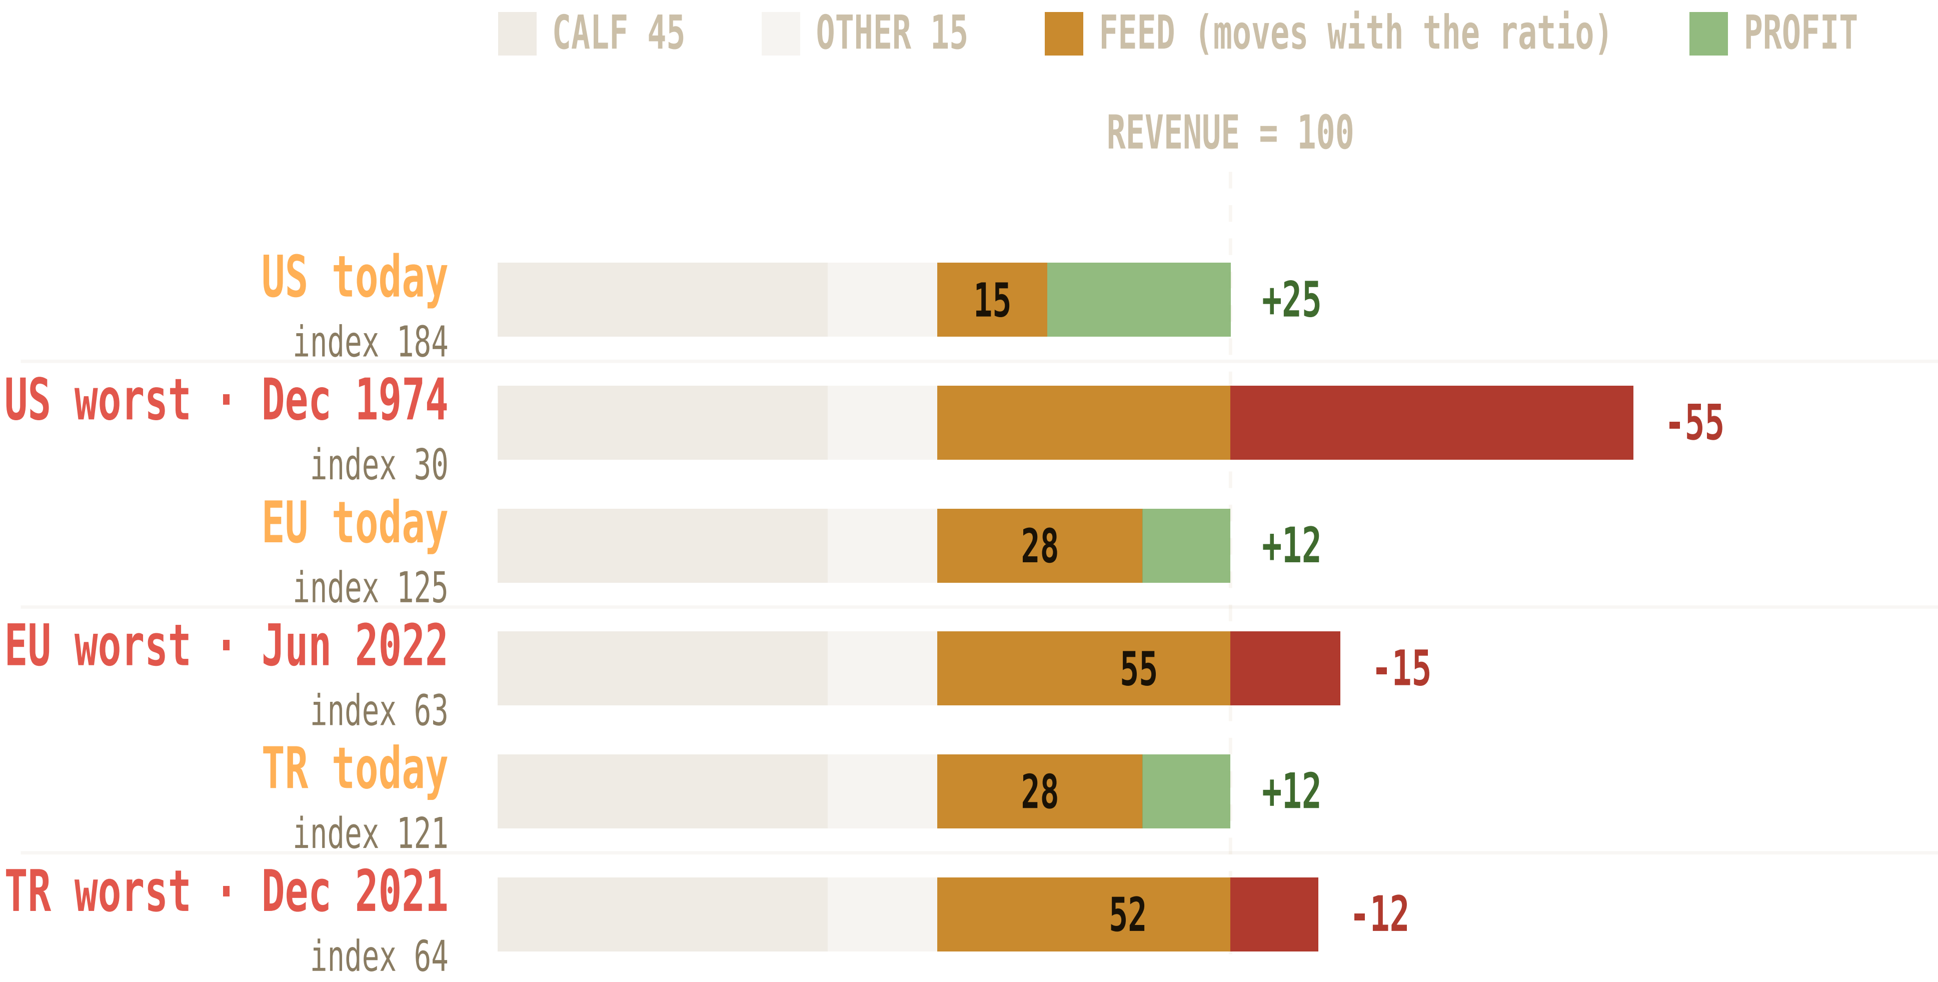
Correlation of year-on-year change, tested at every shift from −12 to +12 months. A market that led would peak clearly off-centre. The EU peaks exactly at zero; Türkiye is flat across −4 to 0.



PEARSON CORRELATION ON YEAR-ON-YEAR PARITY CHANGE · US–EU 116 OVERLAPPING MONTHS · US–TÜRKİYE 186

The same swing, in all three markets.

Costs per 100 of revenue — today vs each market's own worst month. Same cost structure everywhere, so the swing is comparable.



ILLUSTRATIVE MODEL · FEED = 35 × (MARKET’S MEAN PARITY ÷ THAT MONTH’S PARITY) · WORST MONTH = WITHIN EACH MARKET’S OWN RECORD

7 · SO WHAT

We don't know what they cut first.

1 **The window is now**

Customers have cash today. The conversation is easier while they are profitable.

2 **Phasing beats size**

A price move landing into a downturn behaves differently from one landing into a peak.

3 **Next step: two to three weeks**

Map what producers actually cut, in what order, in the last two downturns — against our portfolio. The macro side is done.
